The cleaning process:

**Step 1:**
- Remove litter and debris from the shed.

**Step 2:**
- Clean the entire shed, along with feeders & waterers.

**Step 3:**
- Apply whitewash (Ca(OH)2) on the floor and the walls.
- Farmers may use a flame gun to disinfect the place.

**Step 4:**
- Spread the litter from a hygienic source and spray disinfectant or lime powder (CaO) 2-3 days before the arrival of the chickens.
- Fumigate the place and equipment after an outbreak.

In the cage system of rearing, the cages should be cleaned thoroughly using disinfect solutions.
